

ZSLA-1 TUBE ATTENUATOR / BUFFER

NOTES:

- * All resistors are 2%
- * This circuit has virtually no load so you will not see a large voltage drop
- * The plate voltage of this circuit is 400 volts which exceeds max recommended tube voltage but these recommended limits assume the tube is under load. We have found the 6N1P to have no problems in this circuit.
- * All grounds terminate to a single point on the XLR connector
